CASHLENS

NAME- TANYA RANA

TEAM NAME - BIZBYTE

INTRODUCTION

What if a business could know that its cash position is heading into danger before the problem actually happens?

That is exactly where CashLens comes to the rescue!

CashLens transforms financial and operational data into a simple, forward-looking cash-flow view, allowing businesses to see whether their projected position is safe, approaching risk, or critical — before making their next decision.

PROBLEM AND SOLUTION

Financial data exists at all times. But, Cash-flow visibility doesn't.

01. Fragmented Data

A business has sales, expenses, invoices, etc., but the information may be in different places.

Problem

It's harder to get one clear picture.

02. Reactive Decisions

A business may realise that there is a cash problem only when cash is already getting low.

Problem

Cash-flow problems may be noticed only after they start affecting the business.

03. Complex Analysis

Managers may have lots of financial numbers but no simple indicator stating safe/warning/critical.

Problem

Raw financial data can be difficult and time-consuming to interpret quickly.

SOLUTION

CashLens turns complex financial data into simple, actionable cash-flow insights.

Centralised visibility

Brings key financial information together in one dashboard.

Cash flow projection

Shows how changes can affect the projected cash position.

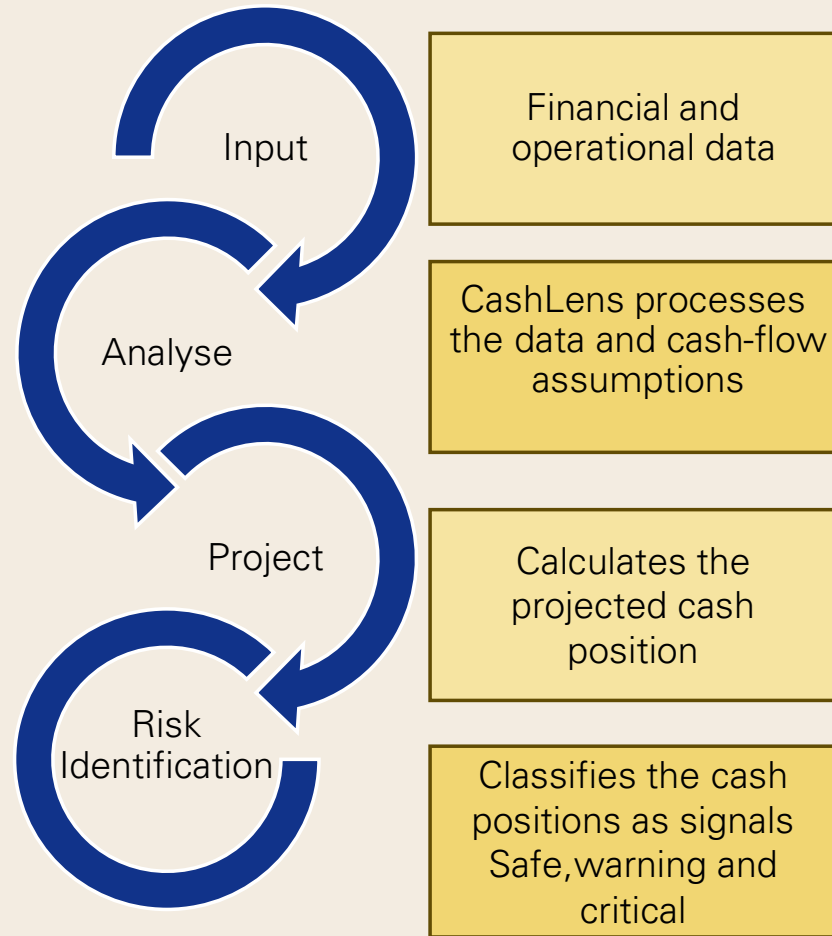

Risk Signals

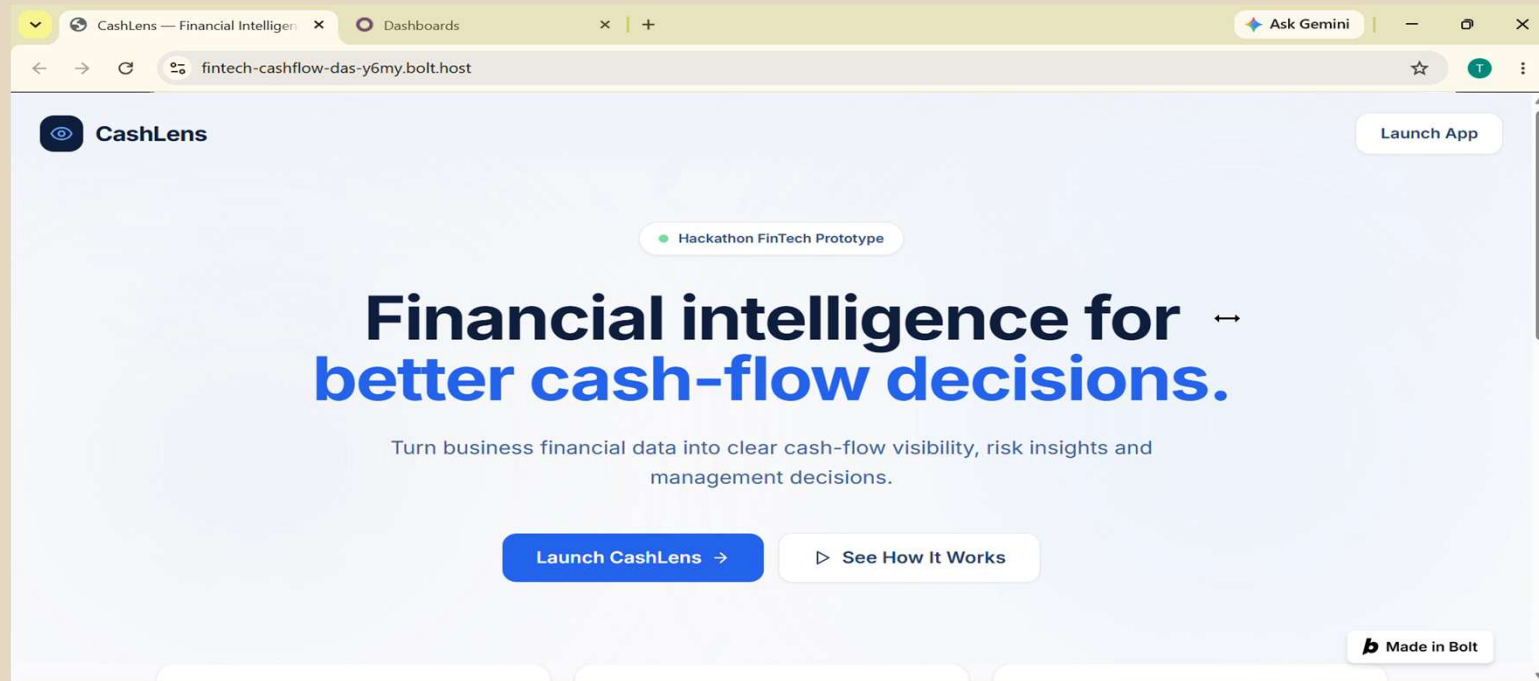

Automatically highlights the position as SAFE, WARNING, or CRITICAL.

Faster Decisions

Helps managers identify potential cash-flow risks earlier.

Product Workflow

IMPACT AND VALUE

Better Visibility

See cash position, sales and projections in one place.

Early Risk Detection

Identify potential cash-flow problems before they escalate.

Faster Decisions

Convert complex financial data into clear signals and insights.

Protect Growth

Help businesses manage liquidity and plan with greater confidence.
